Online support, making your job easier

Reliable results that can be planned are the basis for success. Benefit from our wealth of know-how and experience, and make use of the services we offer. With a simple click of the mouse.

Vogl-Akustiker.de

The right acoustics for every room situation

Whether for open-plan office, theatre hall or classroom – our acoustician aid Vogl-Akustiker allows individual acoustic calculations in compliance with DIN 18041 or ÖNORM B 8115-3. Taking a variety of parameters into consideration, such as the standard and the desired utilisation, the respective ranges and limits of tolerance are plotted. This enables you to find the suitable Vogl product for your project quickly and easily.

Vogl-Ausschreiben.de

Save time!

Find the appropriate text for your tender specifications quickly in our database.

It is available for download in all standard formats (e.g., GAEB XML, GAEB 90, DATANORM 5, PDF, ÖNORM ...).

Vogl-Videothek.de

Images speak louder than words...

Our installation videos give you a clear overview of the single working steps when handling our products. Since the instructions completely do without any spoken or written text, they are internationally understood and easy to follow for any skilled worker.

All online support offers at a glance:

- Videos
- Acoustic calculator
- Picture gallery
- Flyers
- Newsletter
- Detailed designs
- Tender specifications
- Installation guides as PDF and animated

Comprehensive support in every phase of the project

Acoustics

Whether seamless acoustic design ceilings with integrated air purification effect or our acoustic plaster system VoglToptec – our ceiling systems, which are tested for harmful substances, serve as sound absorbers in highly frequented zones and thus make for an agreeable room atmosphere.

Light

The concepts of many architects and designers comes true: Light sources and ceilings form a monolithic unified element. In addition to stretch ceilings, we also offer you individually pre-fabricated moulded gypsum elements, coved lighting and light channels and the perfectly matching light elements.

Design

Modern ceiling design focuses on the interplay between form and colour. Whether floating ceiling, 3D-element or customised moulded components – we can also implement your idea, and with a high degree of pre-fabrication as an added bonus.

The components come disassembled to suit site requirements and are then simply re-assembled on site in easy to follow step by step guide.

Climate

Leading in terms of energy efficiency and performance – conserving energy resources and reducing operating costs should be the objective of sustainable construction. Both aspects can be implemented with VoglThermotop. Compared to conventional air handling systems, operating costs can be significantly reduced.

Framework

Top Quality for Guaranteed Reliability

We are committed to a holistic approach in the design of ceilings. For this reason, the issue of framework is always part of our consideration, since it is crucially affects the finished ceiling surface.

It is all the more important for us to also develop our own matching accessories, to continuously improve and manufacture them in our own factory while observing the most stringent quality standards.

But this alone is not enough: To fully achieve our aspiration for quality and precision, we have our own toolmaking that ensures high-quality manufacturing and servicing of the required tools.

Thanks to sophisticated labour-saving technical as well as the use of high quality materials, our products help us generate real added value for the installation companies.

- Products efficiently designed right down to the smallest detail
- Manufacturing in our own die-cutting factory in Emskirchen
- Strictly stringent criteria for primary material selection
- Internal and external product testing
- Full traceability of all products

Our portfolio comprises high-quality components for:

- CD 60/27 structures
- UA 50/40 wide-span supporting structures
- T-profile systems
- Clamping profile systems

as well as sophisticated problem solvers for:

- Wall structures

Illustration	Item no.	Description	PU PU/large bundle
	PRO-00100	CD profile 60/27/0.6 rE, 1,190 mm	12 pcs. (14.28 m) 180 pcs. (214.20 m)
	PRO-00101	CD profile 60/27/0.6 rE, 2,600 mm	12 pcs. (31.20 m) 180 pcs. (468.00 m)
	PRO-00102	CD profile 60/27/0.6 rE, 3,100 mm	12 pcs. (37.20 m) 180 pcs. (558.00 m)
	PRO-00103	CD profile 60/27/0.6 rE, 3,600 mm	12 pcs. (43.20 m) 180 pcs. (648.00 m)

	PRO-00001	CD profile 60/27/0.6 rE, custom length Manufactured according to EN 14195	
	PRO-00106	UD profile 28/27/0.6, 3,000 mm Wall connection profile for CD profiles Manufactured according to EN 14195	16 pcs. (48.00 m) 288 pcs. (864.00 m)
	PRO-00004 on request	CD profile 60/27/0.6 rE, concave, 4,000 mm Bend radius from 500 mm CD profile 60/27/0.6 rE, concave Custom lengths on request The minimum order quantity per curved radius is 20 linear metres. For production reasons, curved CD profiles come with 150 mm straight sections on each end. Product realisation details: radius (r) + chord (s) or radius (r) + rise (h) or chord (s) + rise (h) or radius (r) + fixed length (b)  concave	
	PRO-00003 on request	CD profile 60/27/0.6 rE, convex, 4,000 mm Bend radius from 500 mm CD profile 60/27/0.6 rE, convex Custom lengths on request The minimum order quantity per curved radius is 20 linear metres. For production reasons, curved CD profiles come with 150 mm straight sections on each end. Product realisation details: radius (r) + chord (s) or radius (r) + rise (h) or chord (s) + rise (h) or radius (r) + fix length (b)  convex	

Illustration	Item no.	Description	Application	PU PU/pallet
	103221	Anchor fixed suspension, CD 60/27 Initial testing according to EN 13964, 0.25 kN		100 pcs./PU 84 PU/pallet
	101539	Anchor suspension, CD 60/27 Initial testing according to EN 13964, 0.25 kN		100 pcs./PU 84 PU/pallet
	101541	Anchor suspension, 80 mm, CD 60/27 Initial testing according to EN 13964, 0.25 kN		100 pcs./PU 96 PU/pallet
	101537	Anchor suspension, 170 mm, CD 60/27 Initial testing according to EN 13964, 0.25 kN		100 pcs./PU 144 PU/pallet
	101543	Fastening clip, CD 60/27 Initial testing according to EN 13964, 0.15 kN Tolerance compensation up to 20 mm possible		100 pcs./PU 32 PU/pallet
	101621	Direct mounting clip, CD 60/27 Straps without screws Initial testing according to EN 13964, 0.25 kN		100 pcs./PU 84 PU/pallet
		Straps with 2 screws LN 3.5 x 9.5 mm Initial testing according to EN 13964, 0.40 kN		
	103220	Direct suspended bracket, 50 mm, Basic, CD 60/27		100 pcs./PU 72 PU/pallet
	103219	Direct suspended bracket, 120 mm, Basic, CD 60/27		100 pcs./PU 96 PU/pallet
	103218	Direct suspended bracket, 200 mm, Basic, CD 60/27 Initial testing according to EN 13964, 0.40 kN Delivery includes unbent product		100 pcs./PU 72 PU/pallet
	101601	Direct suspended bracket, 50 mm, 4-hole, CD 60/27		100 pcs./PU 72 PU/pallet
	101602	Direct suspended bracket, 120 mm, 4-hole, CD 60/27		100 pcs./PU 96 PU/pallet
	101606	Direct suspended bracket, 200 mm, 4-hole, CD 60/27 Initial testing according to EN 13964, 0.40 kN Delivery includes unbent product		100 pcs./PU 72 PU/pallet
	101614	Direct suspended bracket, 50 mm, 4-hole, wood 50/30		100 pcs./PU 72 PU/pallet
	101615	Direct suspended bracket, 120 mm, 4-hole, wood 50/30		100 pcs./PU 96 PU/pallet
	101618	Direct suspended bracket, 200 mm, 4-hole, wood 50/30 Initial testing according to EN 13964, 0.40 kN Delivery includes unbent product		100 pcs./PU 72 PU/pallet

Illustration	Item no.	Description	Application	PU PU/pallet
	100923	Direct suspended bracket, adjustment 40–70 mm, CD 60/27 Including locking pins Initial testing according to EN 13964, 0.47 kN		50 pcs./PU 66 PU/pallet
	100924	Direct suspended bracket, adjustment 59–108 mm, CD 60/27 Including locking pins Initial testing according to EN 13964, 0.58 kN		50 pcs./PU 48 PU/pallet
	104073	Cross connector, CD 60/27 Initial testing according to EN 13964, 0.40 kN Delivery includes unbent product		100 pcs./PU 148 PU/pallet
	104076	Cross connector, CD 60/27, bent Delivery includes bent product		100 pcs./PU 84 PU/pallet
	101575	UA cross connector, UA 50/CD 60/27 Initial testing according to EN 13964, 0.40 kN Delivery includes unbent product		100 pcs./PU 148 PU/pallet
	101565	Anchor bracket, CD 60/27 Initial testing according to EN 13964, 0.25 kN		100 pcs./PU 96 PU/pallet
	101573	Twisting anchor bracket, CD 60/27 Initial testing according to EN 13964, 0.25 kN 		100 pcs./PU 96 PU/pallet
	100912	Support clip, CD 60/27 Clamping width up to 17 mm		50 pcs./PU 136 PU/pallet
	100915	Adjustable vibration bracket, 30 mm, CD 60/27		100 pcs./PU 102 PU/pallet
	100916	Adjustable vibration bracket, 45 mm, CD 60/27		100 pcs./PU 102 PU/pallet
	100917	Adjustable vibration bracket, 60 mm, CD 60/27		100 pcs./PU 66 PU/pallet
	100914	Adjustable vibration bracket, 90 mm, CD 60/27 Application: wall shell types		100 pcs./PU 48 PU/pallet

Illustration	Item no.	Description	Application	PU PU/pallet
	102625	Flush connector, CD 60/27 Product supplied flat, for unfolding on site		100 pcs./PU 108 PU/pallet
	101589	Universal connector, CD 60/27 Product supplied flat, for unfolding on site		100 pcs./PU 84 PU/pallet
	101586	Connector, 80 mm, CD 60/27		100 pcs./PU 32 PU/pallet
	101595	Connector, lengthwise, CD 60/27		100 pcs./PU 48 PU/pallet
	101579	Angled connector, flat, CD 60/27 For on-site angle adjustment		100 pcs./PU 24 PU/pallet
	101583	Angled connector 90°, CD 60/27 Angle default setting is 90°		100 pcs./PU 24 PU/pallet
	101585	Angle connector 45°-179°, CD 60/27 Angle default setting according to customer specification		100 pcs./PU 24 PU/pallet
	101587	Vertical connector, T-connector, CD 60/27 T-connector movable within the CD profile, suitable, for example, for the installation of luminaire boxes		100 pcs./PU 24 PU/pallet

	102334	Unloading costs with crane 24 m		1 tonne
	102335	Unloading costs with crane 27 m Unloading is carried out with truck-mounted crane; details on request. Calculation of minimum amount for 10 tonnes. For cranes, the unloading time of 15 min. per tonne is included. Set-up time is part of unloading time. Unloading time > 15 min. will be charged additionally.		1 tonne

VoglFuge system

with air purification
effect as a standard feature

Ceilings without filler

Acoustic design ceilings meet the highest demands on performance and aesthetics in drywall construction. Particularly in highly frequented areas, such ceiling systems serve as sound absorbers, cooling element and a focal point at the same time. For this reason, a high degree of precision in installation is particularly required. Unlike conventional ceiling solutions, errors in the installation are immediately visible in the finished product and seriously affect the final appearance.

This is where the VoglFuge system comes into play, allowing acoustic design ceilings to be implemented quickly, economically and with the utmost reliability during installation for guaranteed best results.

Benefits of the VoglFuge system:

The unique joint technology offers maximum reliability for installation and finishes:

- Quick mounting of panels – “edge-to-edge”
- No more complex panel alignment
- Quickest possible joint finishing with our unique VoglFuge strip
- Significant time saving due to quick installation and drying times
- Maximum crack resistance
- Less dust and moisture
- Always complete with the VoglFuge system kit including perforated panel screws SN 3.5 x 30 mm

Vogl acoustic design ceilings of VoglFuge system are perforated ceiling panels with high acoustic performance and air purification effect (adsorption).

Black or white acoustic fleece backing (other fleece colours on request), all sides sharp-edged with undercut for installation using the quickest and most secure “edge-to-edge” laying principle.

Based on standard: EN 14190 “Gypsum board products from reprocessing”
Material class: A2-s1, d0 (non-combustible) according to EN 13501-1
Long edge: SK (sharp-edged)
Short edge: SK (sharp-edged)

Acoustic design panels with moulded components attached

Acoustic design panels according to layout plan

You want a ceiling that features not only high acoustic performance, but also outstanding appearance?

We are glad to assist you! Our experts can adapt our acoustic design panels exactly to your desired ceiling surface. When manufacturing ceiling systems to plan, we supply the custom-made and perfectly fitted acoustic design panels as well as a layout plan for use on the job site, thus ensuring reliable results for the installation. And of course, our moulded components, stretch ceilings and ceiling components can be perfectly integrated into your planned ceiling surface.

Visible Chamfer system

with air purification
effect as a standard feature

Easy, quick, reliable

Thanks to the Visible Chamfer system, acoustic design ceilings can be implemented quickly and effectively without any joint finishing. The Visible Chamfer system is an economic and, above all, clean solution especially when the acoustic design of particularly crack-prone ceilings is needed, since this works without any joint finishing operations. It is therefore ideally suited for gymnasiums with their extra-high ceilings. In addition to this, it can also be used to deliberately create a grid design of the ceiling which can, for instance, be mirrored in the greater room geometry.

Benefits of the Visible Chamfer system:

The circumferential Visible Chamfer (2 x 2 mm) of the acoustic design panel enables fast and cost-efficient installation without joint finishing:

- Quick mounting of panels – “edge-to-edge”
- Significant time savings
- No joint finishing necessary
- Maximum crack resistance due to virtually jointless design
- With standard air purification effect
- Ceilings ready for painting within shortest time

Framework

Ceiling panel

Finish

The all-in-one system reliability

Upon request, Vogl Decken-systeme will deliver all materials required to produce ceilings with finished surfaces. High-quality building materials from framework to finishing assure top results at the assembly site.

Vogl acoustic design panels of the Visible Chamfer system are perforated ceiling panels with high acoustic performance and air purification effect (adsorption).

Black or white acoustic fleece backing (other fleece colours on request), four-side sharp-edged as a visible chamfer for installation by means of the quickest and most reliable “edge-to-edge” installation principle.

Other available options: Vogl acoustic design panels with non-perforated edges, block perforation, applications, manufacture in accordance with customer designs and ceiling plans.

Based on standard:	EN 14190 “Gypsum board products from reprocessing”
Material class:	A2-s1, d0 (non-combustible) according to EN 13501-1
Long edge:	Visible Chamfer 2 x 2 mm
Short edge:	Visible Chamfer 2 x 2 mm

*Note: Despite being perforated irregularly, random perforation panels still yield a certain linear layout as the abutting panel edges must be non-perforated in any case. This is unavoidable and independent of the workmanship of the specialist contractor.

GSG4 Joint system

The evolution of the compound seam

For the installation of seamless acoustic ceilings, the compound seam has become established in the market with all its strengths and weaknesses. Therefore, Vogl Deckensysteme decided that there is room for improvement.

By means of high-precision panel production and newly defined accuracy, Vogl Deckensysteme has developed a quick compound seam for acoustic ceilings to meet market requirements.

The result is impressive – the new GSG4 Joint.

Benefits of the GSG4 Joint system:

Surrounding rebate of acoustic design panel allows quick installation and easy joint finishing:

- Less waste at borders due to 4-side edge design
- Factory primed edges – ready for finishing
- Sturdy butt edges without any weak points
- Finishing possible with common fillers in compliance with manufacturer's instructions
- Even more time saving thanks to filling with our Vogl ReadyFiller (Item No. 102324)

with air purification
effect as a standard feature

✓ To achieve an optimum of time saving on site, every labour-saving feature helps.

GSG4 edges are, therefore, factory-primed and cardboard edges slightly chamfered.

For quick and easy installation on site – a solution from practical experience for practical use!

Vogl acoustic design panels of the GSG4 system are perforated ceiling panels with high acoustic performance and air purification effect (adsorption).

Black or white acoustic fleece backing (other fleece colours on request).

Other available options: Vogl acoustic design panels with non-perforated edges, block perforation, applications, manufacture in accordance with customer designs and ceiling plans.

Based on standard: EN 14190 "Gypsum board products from reprocessing"

Material class: A2-s1, d0 (non-combustible) according to EN 13501-1

	LP-00420 LP-00421	Acoustic design panel GSG4 12/20/35R Acoustic fleece, black Acoustic fleece, white	1,200 x 2,000 x 12.5 mm Perforated area: 11.0 % Mass: 8.9 kg/m ²	60.0 m ² * 25 pieces

*Note: Despite being perforated irregularly, random perforation panels still yield a certain linear layout as the abutting panel edges must be non-perforated in any case. This is unavoidable and independent of the workmanship of the specialist contractor.

Compound Seam system

with air purification
effect as a standard feature

Traditional technology – the Compound Seam

In addition to the VoglFuge joint system, Vogl Deckensysteme also offer the classical and most commonly used Compound Seam in its product line. It is available in numerous perforation patterns and design variations and is naturally manufactured with maximum precision at our own factory.

Other than the systems with edge-to-edge installation technique, this joint variation is laid with space between the panels by using mounting aids and retro filled afterwards with joint compound. When done correctly, the joint possesses a very high degree of rigidity after curing.

Benefits of the Compound Seam:

- Proven joint technology can be performed by any drywall installer without any additional training
- Due to the high quality of Vogl acoustic design panels, you get, with proper workmanship, a flawless end result
- With standard air purification effect
- Finishing possible with common fillers in compliance with manufacturer's instructions

Vogl acoustic design panels of the Compound Seam system are perforated ceiling panels with high acoustic performance and air purification effect (adsorption).

Black or white acoustic fleece backing (other fleece colours on request).

Other available options: Vogl acoustic design panels with non-perforated edges, block perforation, applications, manufacture in accordance with customer designs and ceiling plans.

Based on standard:	EN 14190 "Gypsum board products from reprocessing"
Material class:	A2-s1, d0 (non-combustible) according to EN 13501-1
Long edge:	SK (sharp-edged)
Short edge:	SK (sharp-edged)

*Note: Despite being perforated irregularly, random perforation panels still yield a certain linear layout as the abutting panel edges must be non-perforated in any case. This is unavoidable and independent of the workmanship of the specialist contractor.

Ball-impact resistant ceiling

Full score for your ceiling

In sports facilities and multi-purpose halls, ceiling systems not only require acoustic effectiveness, but also extreme stability. Particularly in highly frequented areas, acoustic ceilings serve as sound absorbers and offer a pleasant atmosphere both for sports and for cultural or music events.

Ideal conditions for using our VoglFuge system, allows ball-impact resistant acoustic design ceilings to be realised quickly, economically and with reliable endresults.

Benefits of the VoglFuge system:

The unique joint technology offers ultimate safety in installation and result also for the ball-impact resistant ceiling structure:

- Different panel variations in 12.5 mm or 15.0 mm thickness
- Ball-impact resistance in compliance with
DIN 18032-3 and DIN EN 13964 Appendix D
- Quick mounting of panels – “edge-to-edge”
- Maximum crack resistance
- Quickest possible joint finishing with our unique VoglFuge strip
- Significant time saving due to quick installation and drying times
- Always complete with the VoglFuge system kit
- including perforated panel screws SN 3.5 x 30 mm

Our acoustic design panels are perforated ceiling panels with high acoustic performance and air purification effect (adsorption).

Other available options: Acoustic design panels with non-perforated edges, block perforation, applications, manufacture in accordance with customer designs and ceiling plans.

Based on standard: EN 14190 “Gypsum board products from reprocessing”
Material class: A2-s1, d0 (non-combustible) according to EN 13501-1
Long edge: SK (sharp-edged)
Short edge: SK (sharp-edged)

*Note: Despite being perforated irregularly, random perforation panels still yield a certain linear layout as the abutting panel edges must be non-perforated in any case. This is unavoidable and independent of the workmanship of the specialist contractor.

Our ceiling system was tested in accordance with DIN 18032-3: 1997-04 "Sports halls – Halls and rooms for sports and multi-purpose use; Testing of safety against ball throwing" as well as EN 13964: 2007-02, Appendix D "Suspended ceilings – requirements and test methods, impact resistance".

Our acoustic design ceilings were tested by an independent accredited testing institute on the basis of the aforementioned standards.

The testing consisted with the ceiling panels being pelted with a handball for a total of 36 shots, at various angles of impact on the suspended ceiling.

The tested ceiling panels withstood the stress without any damage. The systems are thus tested as "ball-impact resistant" in compliance with DIN 18032-3 for the application area of "ceiling" as well as EN 13964 Appendix D as "Class 1A".

This applies to the following acoustic design ceiling panels in conjunction with the secondary profile centres indicated:

Acoustic design panel, th = 12.5 mm		
Item	Perforated area	Centre distance of secondary profiles (mm)
6/18 round	8.7 %	250
8/18 round	15.5 %	250
10/23 round	14.8 %	250
12/25 round	18.1 %	200
15/30 round	19.6 %	200
20/42 round	17.8 %	200
8/12/50 round	13.1 %	250
12/20/66 round	19.6 %	200
8/18 square	19.8 %	200
12/25 square	23.0 %	200
8/15/20 round	9.5 %	250
10/16/22 round	12.6 %	250
12/20/35 round	11.0 %	250

Acoustic design panel, th = 15.0 mm		
Item	Perforated area	Centre distance of secondary profiles (mm)
6/18 round	8.7 %	333
8/18 round	15.5 %	333
10/23 round	14.8 %	333
12/25 round	18.1 %	333
15/30 round	19.6 %	330

VoglColor Panel

Focused on colour to the very core

Colours influence our perception of rooms and our sense of well-being, while texture creates charismatic surfaces. Colour can be used in interior design to significantly improve the living and comfort factor. Vogl-Color Panels allow you to add colourful accents precisely and easily.

VoglColor Panels give you the possibility of combining perforation surfaces as well as acoustic fleece individually and in various colours.

Putting colour into the picture:

The unique pre-fabrication offers decisive advantages:

- Even colouration of the inner surfaces of the perforation
- Available in many shades of colour
- Contrast creation with acoustic fleece possible

VoglColor Panels offer the possibility of factory-applied or on-site colouring with colour combinations for finishing coat, inner perforation and fleece colour.

The finishing coat is always applied in three layers by the specialist painter on-site.

Our
installation guides
are available online at
www.vogl-ceilingssystems.com

Benefits:

- Perfectly homogeneous surfaces and properly coloured inner perforations
- Significant time saving on site
- Satisfies highest aesthetic demands

VogIThermotec Panels

with air purification
effect as a standard feature

and VogIThermotec Panels PLUS 0.45 / 0.52

To achieve the required performance of highly efficient cooling and heating ceilings, it is essential to choose the ideal panel type.

Our company VogI Deckensysteme offers you three different variants of our VogIThermotec Panel / VogIThermotec Panel PLUS, which are available with various joint systems.

Along with the defined thermal conductivity, the products also differ in terms of the gypsum core mixture; the graphite-modified design allows particularly high performance values.

All VogIThermotec Panels are available
in panel thickness of 10.0 mm only.

- VogIThermotec Panel
Thermal conductivity λ approx. 0.30 W/m*K
- VogIThermotec Panel PLUS 0.45
Thermal conductivity λ approx. 0.45 W/m*K
- VogIThermotec Panel PLUS 0.52
Thermal conductivity λ approx. 0.52 W/m*K

VogIThermotec Panels / VogIThermotec Panels PLUS are perforated ceiling panels with high acoustic performance, defined thermal conductivity and air purification effect.

Black or white acoustic fleece backing (other fleece colours on request).

Other available options: VogIThermotec Panels with non-perforated edges, block perforation, applications, manufacture in accordance with customer designs and ceiling plans.

Always order the required screws separately for all VogIThermotec Panels, also for the VogIFuge system.

Based on standard: EN 14190 "Gypsum board products from reprocessing"

Material class: A2-s1, d0 (non-combustible) according to EN 13501-1

Long edge: depending on joint finishing

Short edge: depending on joint finishing

Note for VogIThermotec Panels PLUS:

The graphite content in the gypsum core results partly in an irregular appearance of the ceiling surface.

This shows especially when regarding the ceiling from a distance at an angle and is unavoidable when using this type of panel.

Joint system: **VoglFuge**

Thermal conductivity: **approx. 0.30 W/m*K**

Panel thickness: **10.0 mm**

VoglToptec system

**Attractive in appearance,
highly active in acoustics**

Acoustic plaster ceilings constitute a worthy alternative to acoustic ceilings with visible perforations. They are the best choice wherever it is about achieving a monolithic ceiling surface and noise reduction at the same time. Since the machine-applied acoustic plaster is available in a great variety of colours, there is no limit to your creativity in interior design. To ensure top quality workmanship and reliable results, our VoglToptec acoustic plaster system is delivered with perfectly matching components.

Economical and ultra-efficient:

A milestone in acoustic plaster ceilings:

- Elimination of panel jointing results in a considerable increase in perforated area, thus enhancing acoustic efficiency
- Fast and more economical installation due to exact edge-to-edge mounting technique
- Sound absorption coefficient of up to $\alpha_w = 0.95$ (absorption class A)
- All from one source: The complete system, perfectly harmonised and tested
- Delivery includes Vogl screw kit

Our
installation guides
are available online at
www.vogl-ceilingssystems.com

Layer build-up of the finishing coats

The acoustic plaster is machine-applied onto the plaster base fleece in three stage operations until a porous plaster layer of approx. 3 mm thickness is achieved.

VoglToptec Akustik Nano SF

Machine-applied acoustic plaster with a very fine surface texture, grain size 0.5 to 0.8 mm

VoglToptec Akustik Color

Machine-applied coloured acoustic plaster, pigmented throughout, according to RAL or other colour charts

VogIToptec acoustic plaster system panels are perforated ceiling panels with high acoustic performance (exception: type Reflexio which creates reflecting areas) for on-site lamination of the fleece plaster base (glass fibre fleece) and subsequent final coating with VogIToptec acoustic plaster.

Acoustic fleece or foil lamination backing, all sides sharp-edged with undercut for installation using the quickest and most secure "edge-to-edge" laying principle.

Delivery including VogIToptec screw kit (incl. perforated panel screws SN 3.5 x 30).

Based on standard: EN 14190 "Gypsum board products from reprocessing"
Material class: A2-s1, d0 or B1-s1, d0 (with foil) according to EN 13501-1
Long edge: SK (sharp-edged)
Short edge: SK (sharp-edged)

VogIToptec Ultrakustik panel

The panel with integrated mounting instruction, thanks to surrounding and transverse screw-fixing and stop bars. Perfect smoothness and excellent stability despite the very high percentage of perforation of up to 33.9 %.

	101227	Vogl Supergrund primer LF 20I Universal primer, absorbency regulating, free from solvents and softening agents, low-emission, free from active fogging substances	1 canister = 20 litres	1 PU = 1 canister 24 canisters/pallet
	101233	VoglToptec plaster base fleece Special glass fibre fleece as plaster base for coating with acoustic plaster, non-combustible, A2, crack-bridging properties, moisture-resistant, dimensionally stable, white colour	Roll width = 1,000 mm Roll length = 100 m	1 PU = 1 roll 15 rolls/pallet
	101235	VoglToptec plaster base fleece, small Special glass fibre fleece as plaster base for coating with acoustic plaster, non-combustible A2, crack-bridging, damp-proof, dimensionally stable, white colour. The plaster base fleece is especially suited for applying wallpaper in the perimeter/wall connection area as well as for custom solutions.	Roll width = 500 mm Roll length = 100 m	1 PU = 1 roll
	101232	VoglToptec special adhesive Ready-to-use, dispersion adhesive, tested for harmful substances, for bonding the plaster base fleece to perforated ceiling panels, free from solvents and softening agents, low-emission, free from active fogging substances, ready-mixed product	1 bucket = 16 kg Consumption: approx. 0.3 kg/m ²	1 PU = 1 bucket 24 buckets/pallet
	PU-00001	VoglToptec Akustik Nano SF Decorative, open-pored, machine-applied acoustic plaster, very fine texture, grain size 0.5 to 0.8 mm, dull matt, high degree of whiteness, ready-mixed product	1 bucket = 18 kg Consumption: 2.7–3.0 kg/m ²	1 PU = 1 bucket 24 buckets/pallet
	PU-00003	VoglToptec Akustik Color Nano SF Decorative, open-pored machine-applied acoustic plaster, very fine texture, grain size 0.5 to 0.8 mm, ready-mixed product; please specify colour of choice (RAL etc.) when ordering	1 bucket = 18 kg Consumption: 3.0–3.5 kg/m ² *	1 PU = 1 bucket 24 buckets/pallet
	104596	VoglToptec application set This set contains essential tools for proper application of our plaster base fleece in the VoglToptec system.	The set contains: - Gloves - Craft knife with a blade - Application smoother - Press roller - Paste syringe	1 PU = 1 set 72 PU/pallet

*Note: Dark or special colour shades may lead to increased consumption. Actual quantities depend on the respective project.

VogIToptec Thermotec

The perfect solution for your acoustic plaster climate control ceiling.

You want your acoustic plaster ceiling to be both visually attractive and provide efficient climate control performance?
Then our VogIToptec Thermotec system is just right for your project!

With the perfect combination of 10 mm VogIThermotec panels and the VogIToptec acoustic plaster system, you will have optimum cooling capacity combined with sound absorption and an attractive finished surface. Of course, with integrated result reliability – as all the system components come from the ceiling specialist Vogl Deckensysteme.

Exemplary presentation

VogIToptec backed with foil

The right choice if you want your ceiling to be impermeable to airflow.

As you surely know, a ventilation system is often required to be installed in the ceiling void to meet air exchange requirements. In many cases, the ventilation is to take place only through the ceiling joints at the perimeters, and the rest of the ceiling surface must be airtight. There is a safe and easy-to-use solution for this application in the VogIToptec system. With the foil laminated on the back of the panels, the acoustic plaster ceiling remains impermeable to airflow – but without compromising its acoustic performance. The ideal product if your finished ceiling ever comes “under pressure”.

More information on these systems is available upon request.

VoglThermotop

The use of cooling and heating ceilings

Today's buildings have to satisfy a wide variety of demands. The focus is always on the users of the building. The building must provide the best possible conditions for them to work efficiently and productively. People can achieve optimum performance only in an optimum environment. A basic requirement for pleasant and performance-oriented work is an efficiently designed workplace. A prevalent aspect here is the feel-good factor. This is achieved by maintaining agreeable room temperatures.

This condition is realised by integrating cooling and heating systems with high radiation effect into suspended ceilings – without any noise or draught. In this process, ventilation is reduced to the optimal degree and induced with the lowest possible speed. An excellent way to realise this is to use VoglThermotop.

Proven competence

Planning and implementing ceilings with VoglThermotop means using a perfect combination of extensive know-how of experienced partners in the fields of cooling and heating ceilings as well as drywall construction. Due to this, all system components are perfectly harmonised to ensure optimum application and result reliability.

Following the proper implementation of the framework, the installation of the cooling/heating coils takes place according to the technical instructions of our long-standing partners. They not only supply materials, but contribute to the ideal execution result with design configuration, installation support as well as detailed knowledge. All the drywall construction components – tested internally and externally, and approved for the respective applications – are supplied by the ceiling specialist Vogl Deckensysteme. By using the perfectly harmonised system components, optimum application and result reliability can be ensured.

The right type of panel for every demand

Two panel variations are available for the use with VoglThermotop: VoglThermotec panel and VoglThermotec panel PLUS.

With a panel thickness of 10.0 mm, both panels have an increased thermal conductivity.

The VoglThermotec panel Plus is, moreover, equipped with a graphite-modified gypsum core for enhanced performance.

Gypsum core
"standard"

Gypsum core "graphite-
modified"

Less energy, greater performance

VoglThermotop combines an acoustic design ceiling with highly efficient additional functions of a cooling and heating ceiling. This ensures an aesthetic ceiling appearance, but also helps to substantially reduce operating costs as compared with conventional air handling systems.

Together with our partners, we develop a concept tailored exactly to your needs.

We support you throughout the entire project phase – from the design through the tendering process to the execution.

The cooling and heating ceiling for maximum efficiency

- Available as a smooth and perforated variant as well as with fine machine-applied acoustic plaster or as a floating ceiling
- Individual design and execution to achieve maximum efficiency from the ceiling surfaces available for activation
- Low operating costs due to low-maintenance complete system, minimum susceptibility to failure thanks to the use of long-time tested materials from experienced partners
- High flexibility for multi-functional expansions – such as lighting, sound and safety systems as well as more building services

VoglThermal Tiles system

The modular thermal tile for modern interior design

Modern ceiling design entails complex tasks in terms of form, colour and function. Accessibility in conjunction with integrated cooling and heating function is a frequent issue.

Together with our system partner, Clina Heiz- und Kühlelemente, we have developed a cooling and heating ceiling system that meets these requirements: VoglThermal Tiles.

This product scores not only for its multiple design possibilities, but also for combining a high level of thermal comfort with excellent sound absorption values.

Benefits of VoglThermal Tiles:

- High cooling and heating performance
- Excellent sound absorption values
- Easy-to-install system with plug hoses (included)
- Prefab ceiling manifolds with plug couplings
- Including high-quality acoustic fleece and insulating material lining
- Factory-applied white surface finish
- Various perforation patterns in round and square perforation to choose from
- Also ideal for renovation projects

The surface-finished inlaid tiles consist of completely pre-fabricated, perforated plasterboard tiles with capillary tube mats integrated between the rows of perforation invisibly at the back.

VoglThermal Tiles are perforated plasterboards precision-manufactured in compliance with EN 14190, th = 12.5 mm, with sharp edges, integrated capillary tube mats backed with sound-absorbing fleece and insulating material lining 30 mm (WLG 040), exposed side with factory-applied white finishing coat.

Minor deviations in the product properties, in particular minor differences in colour and texture as well as insignificant deviations in length, width and thickness of the material delivered, are not considered defects. Mixing panel material from different production periods should be avoided.

Installation system: Basic (T15/T24) exposed grid
Based on standard: EN 14190 "Gypsum board products from reprocessing"
Material class: C-s2, d0 according to EN 13501-1
Long edge: SK (sharp-edged)
Short edge: SK (sharp-edged)

Ceiling tiles

Design liberty by the square

Ceiling tiles by Vogl Deckensysteme bring aesthetics and functionality together.

Along with a great variety of perforation patterns, Vogl Deckensysteme offers various installation systems (exposed, concealed, partially concealed). The ceiling tiles with high acoustic performance score not only with their quick and easy processing, but also with their unrestricted accessibility and maximum flexibility in the first place.

Ceiling tiles maximize possibilities:

- Customised solutions available, e.g., plank sizes
- High-precision perforated plasterboard tiles
- Wide range of design and combination options
- Highest acoustic performance due to factory-applied acoustic fleece
- Numerous design options for factory-coated or printed tiles, or with an additional function
- Easy installation and removal

Edge shape "Basic T15/T24"

Vogl ceiling tiles are accessible, perforated ceiling panels with high acoustic performance for installation into T-profile systems.

The black acoustic fleece lining on the back (other colours on request) satisfies the highest demands on sound absorption.

Vogl ceiling tiles come with a factory-applied, pure white finishing coat (similar to RAL 9010).

Minor deviations in the product properties, in particular minor differences in colour and texture as well as insignificant deviations in length, width and thickness of the material delivered, are not considered defects. Mixing panel material from different production batches should be avoided.

Installation system: Basic (T15/T24) exposed grid

Based on standard: EN 14190 "Gypsum board products from reprocessing"

Material class: A2-s1, d0 (non-combustible) according to EN 13501-1

Further perforation patterns/dimensions available on request

Edge shape "Premium T24"

Vogl ceiling tiles are accessible, perforated ceiling panels with high acoustic performance for installation into T-profile systems.

The black acoustic fleece lining on the back (other colours on request) satisfies the highest demands on sound absorption.

Vogl ceiling tiles come with a factory-applied, pure white finishing coat (similar to RAL 9010).

Minor deviations in the product properties, in particular minor differences in colour and texture as well as insignificant deviations in length, width and thickness of the material delivered, are not considered defects. Mixing panel material from different production batches should be avoided.

Installation system: Premium (T24) concealed grid

Based on standard: EN 14190 "Gypsum board products from reprocessing"

Material class: A2-s1, d0 (non-combustible) according to EN 13501-1

Long edge: FK T24 (bevelled), type Premium

Short edge: FK T24 (bevelled), type Premium

Vogl Academy

Practical Know-how
for optimal results

Ceiling competence From our experience – to practical use

“Ceiling” is an important aspect in modern architectural design. It is not just a matter of good aesthetics – it has to provide an agreeable room atmosphere and balanced acoustics at the same time. And it goes without saying that all the technology behind it shall remain hidden from view.

To that ever increasing requirements are met and offer your high-quality ceiling solutions, during our training sessions we not only demonstrate adequate systems, but also convey extensive theoretical as well as practical knowledge.

Our in house Training Centre you will gain knowledge of much more than just system and product advantages – during our practical training sessions you will directly learn how to professionally utilise our systems.

Topics covered (not exclusively)

- Acoustic plaster system VoglToptec
- Acoustic design ceilings (various joint systems)
- Framework for acoustic design ceilings
- Moulded components and special constructions

Target groups

- Drywall construction/interior design specialists
- Professional painters
- Construction site and project managers
- Building material traders

Training objectives

- Understanding of valid regulations
- Recognition of product advantages
- Gaining safety in installation
- Recognition and avoidance of typical installation errors

Our Vogl Academy in Emskirchen

Please send your registration directly to info@vogl-ceilingssystem.com.

If you have any questions, get in touch with us on the phone +49 9104 825-0 or send an e-mail to info@vogl-ceilingssystem.com

Floating ceilings

Add accents

Due to their variety in colour and shape, acoustic floating ceilings allow for great versatility in interior design. Appealing design and acoustic efficiency can thus be functionally combined with each other. This will ensure a more pleasant room environment, particularly in demanding areas, such as office workplaces or lobbies etc.

With floating ceilings, numerous solutions are possible even if the room design must meet demanding requirements, e.g., due to concrete core temperature control. Depending on the requirement, they can be optionally fitted with multiple functions, such as heating and cooling elements. Our floating ceilings can be manufactured as a standard product as well as in accordance with individual customer specifications, pre-assembled, and – if sizeable – disassembled again into manageable segments for ease of transport and on-site handling. High degree of pre-fabrication and simple installation technology assure quick processing on site.

Perfect design available ex factory

The unique pre-fabrication offers decisive advantages:

- Optimum joint appearance without visible panel edges
- Wide choice of shapes, colours and functions
- Perfect complement to existing ceilings
- Easy installation
- Bespoke solutions can be produced at short notice
- Floating ceilings for direct final installation – it could not be easier

Illustration	Item no.	Description	Dimensions	PU
	101728	Acoustic floating ceiling, ready to install Material: perforated plasterboard according to EN 14190, 8/18R Acoustic fleece backing, black Surface with white finishing coat Backed with insulating material lining, 30 mm Including: Framework for four suspension points, suspension accessories (wire rope set), packed for safe transport Further perforation patterns/dimensions available on request	1,000 x 2,000 x 80 mm (Visible dimensions)	1 piece

Moulded components

Experience a room through precision

The bending and folding technology offers an abundance of creative design possibilities. An optimum ceiling solution can be realised with linear V-grooves.

In addition to the Vogl Fold Fix, it is the various angles or edges, but also the folded and rounded moulded components that create – depending on customer preference and design – an impressive experience of space.

Effective ceiling design can be realised with precisely sized custom-made moulded components, such as quarter shell, half shell, lamellae, funnel, dome or vault.

Available V-grooves

Vogl Fold Fix – moulded components come flat (space-saving) and factory-supplied with Vogl Fold Fix adhesive tape.

Special glued moulded components come ready to install.

Special unglued moulded components come flat and must be assembled and glued on site.

1. Delivered flat

2. Remove cover paper

3. Press limbs firmly together

4. Done!

Key advantages:

- Glueless joining of moulded components on site, no priming, no drying times
- Easy on-site handling of moulded components
- High adhesive strength immediately
- Angle adjustment of $\pm 2^\circ$ after adhesion
- Delivered flat – less handling damage

Note:

Vogl Fold Fix moulded components must be installed without any stresses acting upon them. The free limb must always be fixated.

3D design

Absolute precision in every dimension

Competence is called for when it comes to the planning and manufacture of vault ceilings, domes or free shapes.

With our practical insight and our manufacturing technologies, we can design and manufacture 3D ceiling systems. Our numerous projects and absolute precision in the production of curved moulded components enable us to achieve the complex interaction between the individual components. In this process, it is not only the design that counts. Another aspect of great importance to us is the ease of handling during transport and on the construction site.

Benefits of 3D moulded components:

- Consistent shapes, perfect radii – component by component
- Negligible filling and patching work required
- Economical and clean way of working
- Elegant, practicable system solutions for frameworks
- High level of pre-fabrication = rational construction site handling

Absolute precision already pre-fabricated:

- Complex two- and three-dimensional shapes can be produced
- Economical installation provides an important time advantage and result reliability
- Manageable units for optimal logistics and handling on the construction site
- Customised special solutions from lightweight steel construction to individual covering are realised

VoglVariety

The ease of complex shape

VoglVariety will allow you to create an impressive experience of space with a high recognition value. This product line makes extraordinary ideas, sophisticated designs and complex shapes come true. Thanks to the special material composition with fibre-reinforced plaster (aka G.R.G. – Glass Reinforced Gypsum), there are no limits to your creativity.

Each and every VoglVariety element is manufactured individually according to your preferences and specifications. We thus provide tailor-made individual modules with a high degree of pre-fabrication to ensure efficient and easy installation on site.

VoglVariety boasts a number of advantages:

- Individual design
- Complex two- and three-dimensional shapes can be produced
- High surface hardness and rigidity
- Low own weight
- Time-saving installation
- Efficient logistics and practical handling on the project site
- Material class A (non-combustible)

Living creativity

Our VoglVariety product line enables a wide range of geometric shapes and designs out of the ordinary. This produces an impressive experience of space.

Thanks to the special material composition of gypsum and fibreglass, VoglVariety inspires with its low own weight. Combined with light, the non-combustible and dimensionally stable elements create stunning focal points.

Comprehensive support in every phase of the project

We support you at every stage of the project.

We deliver practice-oriented solutions and optimal job site logistics.

Planning & development

We help you with

Conceptualising creative ideas, make design suggestions and prepare planning schemes. We will provide you with a cost estimate.

Submittal & approval

We prepare

detailed technical documentation and support with the proof of material properties.

Engineering & consulting

We do the

detailed technical design of the ceiling concept, prepare installation plans, 3D-CAD and detailed drawings.

Tendering & award

We provide

tender documentation, ensure proper preparation of specifications, check and clarify technical alternatives.

Execution & service

We guarantee

a high degree of pre-fabrication and site-specific delivery. We can assist with finding specialists or giving clear instructions to installers.

Creative and inspiring

With VoglVariety, you can explore your creativity to the fullest and let your inspiration flow. This product line provides an unlimited variety of shape.

Individual and limitless

What makes VoglVariety stand out is its unlimited design freedom.

Whether dome, vault, column cladding or light channel, this product line is impressive in any application.

Functional and rational

VoglVariety is compatible with most standard moulded components made by Vogl. Each individual modules are factory fitted with fixing points for subsequent suspension in the vernier system to ensure quick and easy installation.

Installation traverse

Ideal solution for attaching additional loads to the framework

If you wish to attach additional loads (e.g., lamps) to the existing ceiling framework, you will need an auxiliary structure.

Our new installation traverse made of sheet steel can be easily hooked to the CD profiles, and smoothly screwed down.

You will obtain a set of 2 installation traverses with fixing material.

Benefits of the installation traverse:

- The set containing all required components to appropriately include the additional loads into the framework of acoustic design ceilings/suspended ceilings made of gypsum
- Material class A1 – non-combustible – due to the use of components made of sheet steel
- Significantly quicker installation as compared to individual wooden structures

Illustration	Item no.	Description	Application	PU
	104175	Installation traverse for CD 60/27, type 333 mm		1 piece
	104987	Installation traverse for CD 60/27, type 500 mm 1 pack = 2 x installation traverses, for secondary profile spacing 333 mm or 500 mm available Including fixing materials: 8 x tapping screws with needle point, LN 9.5 mm for screw connection in the CD profiles 4 x flat-head self-drilling screws, 4.2 x 32 mm, to attach luminaires or the like		

Note: The maximal inducible weight is always subject to verification on site considering the entire structure.

The standard catch mechanism (for access panels > 300 mm) prevents the access panel insert from falling out accidentally while being opened. For work in the ceiling void, the insert can be conveniently detached and removed.

The factory-installed perforated panel insert makes for easy integration into the ceiling surface.

Exception: Random perforation panels should always be fitted into place on site.

Our
installation guides
are available online at
www.vogl-ceilingssystems.com

Access panels

Quick access, homogeneous design

Acoustic ceilings have more than one function. The space in the ceiling void is often used for technical installations such as lighting, climate control, sound and fire protection systems.

The access panels are the solution of choice to keep these installations accessible for repairs and maintenance even after the suspended ceiling has been installed.

They offer top performance while fulfilling all aesthetic requirements at the same time.

Benefits of access panels in detail:

- Available in 10.0/12.5/15.0 mm thickness for various applications
- Sturdy, high-quality aluminium frame for dimensional stability
- Multiple perforation patterns available ex factory
- Consistency in the rows of perforation throughout the ceiling
- Backed with acoustic fleece for high acoustic performance
- Sturdy catch mechanism (for panels > 300 mm) prevents the access panel insert from falling out during opening
- Customised special designs can be fulfilled

The access panels are the perfect technical solution for fast installation of accessible openings into perforated ceilings.

The perforated panel insert precisely factory-fitted into the opening frame is lined with black or white acoustic fleece for high acoustic performance.

The specified standard items are designed for a panel thickness of 12.5 mm.

VoglModu

Light to the site – ready to go

With the VoglModu illumination modules, you receive factory-made light modules for the first time. They provide freedom of design with the additional advantage of easy installation.

They offer diversity and multi-purpose use: Whether for integration in suspended ceilings or as tailored floating ceilings. The round or square design of the illumination modules perfectly harmonises with the respective perforation patterns of the perforated panel ceilings. VoglModu is equally suitable as a functional focal point for the design of smooth or plastered surfaces, whether wall or ceiling.

Benefits of VoglModu:

- Fits in perfectly with the ceiling appearance
- Large-area and coloured lighting
- Simplicity in installation in suspended ceilings or for integration into pre-fabricated floating ceilings
- No special skills required
- As fast as lightning
- Can be used as a “stand-alone” light module

The modular illumination system ready for installation:

- The fantastic effects of a light module with surprising ease of assembly
- Pre-fabricated modules for simple wall and/or ceiling installation
- For integration in suspended perforated ceilings, plaster ceilings and smooth ceilings or as integration in floating ceilings to complement existing surfaces
- Perfectly flush and levelled perimeters in the finished areas
- Available in various types of shape, format and technical equipment
- Apart from the standard design, a dimmable or a DALI-compatible design with colour combinations is available
- Innovative colour design due to integration of LED technology in the desired colour of light or RGB LED bands

Pre-fabricated for delivery to the project site:

The light module is installed into the ceiling structure accurately fitting, which results in perfectly flush and levelled perimeters in the finished areas.

DI = standard model, dimmable 1–10 V, for electronic ballasts

DALI = short for “Digital Addressable Lighting Interface” – the standardised digital interface for electronic ballasts. DALI intelligent light management offers many advantages.

All light modules are delivered with LED technology and diffuser foil.

For more information on installation and electric requirements, please refer to our technical documentation.

Illuminated and stretch ceilings

Impressive play between form, colour and light

The spectrum of design possibilities with acoustic design ceilings can be significantly expanded due to the integration of illuminated and stretch ceiling surfaces. The combination of these systems ensures both: Optimal acoustics and the desired spatial effect.

These systems are available in numerous designs (fixed or accessible). You have various materials (foil, fabric or glass), colours and shapes to choose from. As to the spectrum of lighting and control technology, it ranges from manual dimmability to daylight simulation and dynamic RGB colour mixing.

Stretch ceilings offer almost unlimited freedom of design with:

- Exciting surfaces and three-dimensional shapes
- Contrasts between colours and degrees of gloss
- Accentuated interaction of light and illumination
- More corporate design by using printed foils
- Ideal combination options with our acoustic design ceilings

Great when renovating:

- Minimal production and business down times
- No generation of dust and moisture
- Buildings generally remain operable
- No removal and disposal of existing ceilings
- No expensive new installations

Great in wet environments:

- Suitable for wellness areas with foil colours or colour-controlled illuminated ceilings
- Completely moisture-resistant foils and profiles
- Splash protection for ceiling installations such as light and sound systems
- Reduction in the reverberation time

For several years, we have worked hand-in-hand with our partner Rentex in the field of illuminated and stretch ceilings.

This cooperation offers significant advantages for you:

- One contact partner who coordinates all interfaces for you
- Numerous design options by combining acoustic design ceiling, acoustic plaster ceiling, customised moulded components and illuminated/stretch ceiling
- You get the complete technical documentation and drawings from us
- We can find qualified specialist contractors for you

Our partner in the range of illuminated and stretch ceilings

You are planning, calculating or carrying out a project that includes both perforated plasterboard ceilings (or tiles, moulded elements, plaster ceilings, etc.) and illuminated ceilings?

Contact us and we will be glad to coordinate the interfaces with our partner Rentex for you. This way you will have only one contact partner for manifold, perfectly designed ceiling surfaces.

Since 1987, Rentex Wand- und Deckensysteme GmbH has been supporting architects, planners and project owners with system solutions for illuminated ceilings and walls from the design stage to the functional, inspected and approved luminous surface. Whether glass, foil or technical lighting fabric, Rentex has a broad range of profile systems for all diffusers to satisfy every design and structural requirement.

The spectrum of lighting and control technology ranges from manual dimmability to computer-aided daylight simulation and dynamic RGB colour mixing. The highlights are made-to-measure ceiling structures of foil, glass or fabric, unusual 3D shapes or complex systems with integrated ventilation, cooling and sound protection.

Vogl Frieze Tape Set

Ceiling friezes in record time

There are various ways of creating friezes for acoustic design ceilings. They typically require intensive pre-planning and tedious time consuming work on site. Now there is an efficient, clean and safe solution: the Vogl Frieze Tape Set. With this method, non-perforated frieze areas can be produced quickly and economically, saving a great deal of time and hassle. The Vogl Frieze Tape Set includes all accessories needed at the job site for making a frieze of any width. Just a few simple steps can produce a neat perimeter or border.

Benefits of the Vogl Frieze Tape Set system:

The unique workmanship provides key advantages when creating your frieze areas:

- Quick, safe and clean workmanship
- No generation of dirt and dust
- Active sound absorption even within the frieze area
- Holes can be re-opened if required
- Filler cannot sink in, nor holes re-emerge

Our
installation guides
are available online at
www.vogl-ceilingssystems.com

		Vogl Frieze Tape Set contains all materials necessary for creating individual frieze areas.		

Double Layer Fleece

Evenness easier than ever

This is what drywall construction has waited for: Evenness between perforated and smooth gypsum boards, that previously was achieved by tediously skimming.

This eliminates time consuming effort to equalise the small difference in height caused by the fleece laminated on the back of the perforated panels.

The idea for achieving evenness in record time is brilliantly simple: The Double Layer Fleece, which is self-adhesive and comes on rolls, ready for use, makes the levelling of height differences easier than ever.

Brilliantly simple realisation of shadow gaps in contrasting colour for the perfectly designed ceiling. Optically appealing design of expansion joints by backing them in black or white.

Benefits of our Double Layer Fleece:

- Faster and more economical installation due to self-adhesive rolled material
- Tedious, time-consuming spackling is now a thing of the past
- Practical helper for many transition and connection details
- Homogeneous material for perfect connection to fleece-laminated perforated panels
- Available in various tape widths for single or double application
- Available in white or black fleece colour

Double Layer Fleece		
Item number	Description	Dimensions
101793	Double Layer Fleece VAD 32 black Self-adhesive fleece, black	Roll width approx. 32 mm Roll length 200 m
101795	Double Layer Fleece VAD 62 black Self-adhesive fleece, black	Roll width approx. 62 mm Roll length 200 m
101794	Double Layer Fleece VAD 32 white Self-adhesive fleece, white	Roll width approx. 32 mm Roll length 200 m
101796	Double Layer Fleece VAD 62 white Self-adhesive fleece, white	Roll width approx. 62 mm Roll length 200 m

Expansion joints

For the coloured design of expansion joints in the ceiling

Your benefits when using Double Layer Fleece:

- Clean workmanship (no need to use a brush)
- Available in black or white
- Tape on rolls is applied quickly and easily

Panel connections

Flush panel connections between perforated panels and smooth plasterboards

Your benefits when using Double Layer Fleece:

- Quick installation with self-adhesive roll material
- No filling work – connection between perforated panels and smooth plasterboards possible with Vogl Frieze Tape 20 mm
- Available in various tape widths
- Single-layer or multi-layer application possible (depending on height difference)

Wall connections

Perfect wall connections in various designs, whether as filled joint or as wall connection with shadow gap

Your benefits when using Double Layer Fleece:

- Functions as separating tape for a filled joint
- Colour of shadow gap available in white or black
- One product only for a variety of joint and connection applications

Our tender specifications are available for download in all standard formats under www.vogl-ausschreiben.de.
